Results-driven **Data Scientist** with over **2 years** of experience in **analytics** and **data optimization**. Achieved a **40% reduction** in deployment time through the enhancement of **CI/CD pipelines**. Skilled in **Python, SQL**, and **AWS**, leveraging these technologies to develop innovative **data solutions** that streamline processes and drive **business insights**.

SKILLS

Tools: Power BI, Tableau, Excel (Pivot Tables, Formulas), DAX, MYOB, VS Code, Airflow
Platforms: SQLite, Airflow, AWS (EC2, Lambda, S3), Azure Databricks, CLI, Node.js
Soft Skill: Time Management, Attention to Detail, Communication, Critical Thinking
Other: BAU Analytics, KPI Reporting, Pricing Models, Agile Methodology, Stakeholder Engagement, CI/CD
Languages: SQL, Python (Pandas, NumPy, Scikit-learn), R, HTML, JavaScript, CSS, C#

PROJECTS

- Deloitte Australia- Data Analytics Simulation**  May 2025 - Present
- Built Tableau dashboards and Excel based classification models to analyze and identify 4 global factories failure prone machines downtime and equity analysis, enabling a **25% reduction in unplanned outages** and **flagging 3 high-risk roles** with potential gender pay gaps.
- Interactive Sales Dashboard**  Dec 2024 - Present
- Developed a dynamic Power BI dashboard to visualize sales trends and product performance implementing **DAX measures, advanced filters, and data transformations**, **reducing reporting time by 40%** and enabling faster business decisions.
- News ETL Pipeline**  Nov 2024 - Present
- Built an automated ETL pipeline using Python, Airflow, and SQLite to **ingest and process 1000+ daily news articles**, **reducing manual effort by over 80%**.

WORK EXPERIENCE

- Customer Service Representative** Jun 2023 - Mar 2024
- The Espresso Doctor Pty Ltd** Fortitude Valley, QLD
- Processed over **100K AUD** worth of warranty claims with **100% accuracy**, ensuring timely and compliant recordkeeping.
 - Entered and maintained detailed customer data across **CRM (MYOB)** and service tracking systems, improving data reliability and retrieval speed.
 - Managed order processing, product returns, and **Goods on Loan (GOL)** documentation through precise digital entry and workflow tracking.
 - Uploaded and organized customer and supplier correspondence, invoices, and claim documentation for **internal audits**. Handled large volumes of **multichannel customer inquiries (phone, email, chat)** while maintaining service quality and data accuracy.
 - Conducted inventory data checks and updated system records to ensure stock alignment with **physical parts inventory**.
 - Supported new employee training on data entry accuracy, document management, and **internal systems** navigation.
- Data Scientist** Sep 2021 - Jan 2023
- Positive Integers Pvt Ltd** India
- Refactored **CI/CD pipelines** for **Credit Risk Propensity Model** using **AWS (S3, EC2, Lambda)** and **Bitbucket**, reducing **deployment time by 40%** and **AWS resource cost by 90%**.
 - Load tested EC2 with production code** under **generic and maximum data load scenarios**, ensuring system reliability and performance stability.
 - Authored enterprise-grade documentation**, including weekly client updates and a detailed **runbook.md** covering execution and troubleshooting.
 - Designed end-to-end process flow diagrams** to support consulting presentations and improve client understanding of the analytics architecture.
 - Enhanced **solar firm's lead-to-sale conversion scoring model** with **K-Prototypes clustering** to identify regions with the highest probability of conversion, improving **targeting precision by 18%**.
 - Cleaned raw location data using VLOOKUP-based mappings**, correcting suburb and state inconsistencies and improving reporting accuracy.
 - Built advanced Excel-based reporting** with formula-driven insights for executive client presentations.
 - Spearheaded **steel price forecasting** with **external API integration (weather, commodity)** by **automating daily extraction and transformation of data**, leading to a **7-day trend classifier with 82% accuracy** that improved **procurement planning** and reduced **quarterly losses by 15%**.
 - Maintained and monitored ML Retail Product Recommendation Model Pipelines** using **PySpark and Azure**, ensuring stable BAU analytics performance and KPI Reporting

EDUCATION

Master of Data Analytics Queensland University of Technology	Feb 2023 - Feb 2025 GPA: 4.91
Project 1: React Portfolio Built a fully functional Personal Portfolio Single Page Application utilizing ReactJS template as part of the learning process and successfully integrated GitHub profile, multiple REST API's integrations with Cascaded Style Sheets (CSS) for Styling and Error Handling capabilities.	
Project 2: IoT- Cybersecurity Threat Detection Engineered a robust anomaly detection framework for IoT edge devices using representation learning and generative sampling to increase minority class detection in cybersecurity log data by over 30%, while maintaining model interpretability and scalability.	
Project 3: Software Code Vulnerability Detection using Deep Learning Developed a machine learning pipeline using Graph Label Propagation Architecture to detect vulnerable C/C++ functions, achieving 94% ROC-AUC score despite data imbalance and structural feature complexity.	
Post Graduate Diploma Analytics and Artificial Intelligence Imarticus Learning	Jan 2021 - Jan 2022 GPA: 6.5
Project: Fraudulent Customer Transaction Detection Using Vestas Corporation dataset, built and validated multiple a ML models to identify fraudulent customer transactions from a massive feature dataset and overcame overfitting by finetuning the models and found XGBoost to be the best model with 98% detecting capabilities.

PUBLICATIONS

Smart Shopping Trolley and Stock Management System  on IJCESR	Mar 2019
Designed an RFID-based smart shopping trolley integrated with Bluetooth and ZigBee modules to automate billing and track inventory , resulting in reduced checkout time and real-time stock updates for both consumers and distributors.
